

# Diophantine geometry and Galois theory 11

Minhyong Kim (University College)

Sakura Workshop "Torsion of abelian schemes and rational points on moduli spaces" - I.M.B.,  
January 25th - 29th, 2010

In his manuscripts from the 1980's Grothendieck proposed ideas that have been interpreted variously as embedding the theory of schemes into either:

- group theory and higher-dimensional generalizations ;
- or homotopy theory.

It was suggested, moreover, that such a framework would have profound implications for the study of Diophantine problems. In this talk, we will discuss mostly the little bit of progress made on this last point using some mildly non-abelian motives associated to hyperbolic curves.
