# Algebra homework 7 <br> Permutations 

Due November 6th, 2019
Please hand in your homework stapled, with your name written on it. All answers have to be justified.
For every $n \geq 1$ we denote by $\mathfrak{S}_{n}$ the $n$-th symmetric group.
Exercise 1. Consider the following permutations:
$\sigma_{1}=\left(\begin{array}{ccccccc}1 & 2 & 3 & 4 & 5 & 6 & 7 \\ 5 & 6 & 7 & 2 & 1 & 4 & 3\end{array}\right), \sigma_{2}=\left(\begin{array}{cccccccc}1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 \\ 2 & 5 & 3 & 7 & 6 & 1 & 8 & 4\end{array}\right), \sigma_{3}=\left(\begin{array}{ccccccc}1 & 2 & 3 & 4 & 5 & 6 & 7 \\ 7 & 3 & 6 & 1 & 4 & 5 & 2\end{array}\right)$.

1. Compute $\sigma_{1} \sigma_{3}$.
2. Both $\sigma_{1}$ and $\sigma_{3}$ can be seen as elements of $\mathfrak{S}_{8}$ by putting $\sigma_{1}(8)=\sigma_{3}(8)=8$. Compute the products $\sigma_{1} \sigma_{2}$ and $\sigma_{2} \sigma_{3}$ in $\mathfrak{S}_{8}$.
3. Decompose $\sigma_{1}, \sigma_{2}$ and $\sigma_{3}$ into products of disjoint cycles, and then write each of them as a product of transpositions.

Exercise 2. Write the following permutations as products of disjoint cycles:

1. $(2,3,7,5)(2,6,1)$
2. $(1,5,2,6)(2,3)(5,7)(1,3,4)$
3. $(2,5,4)^{122}$
4. $(1,2,3,4)^{-1}$

Exercise 3. Let $a_{1}, \ldots, a_{k}$ be distinct elements of $\{1, \ldots, n\}$. Compute the inverse in $\mathfrak{S}_{n}$ of the cycle $\left(a_{1}, \ldots, a_{k}\right)$.

Exercise 4. Compute the sets

$$
E=\left\{\sigma \in \mathfrak{S}_{4}, \sigma(1)=4\right\}
$$

and

$$
F=\left\{\sigma \in \mathfrak{S}_{4}, \sigma(3)=3\right\} .
$$

Are they subgroups of $\mathfrak{S}_{4}$ ?
Exercise 5. Prove that if $\sigma$ is a cycle of odd length, then $\sigma^{2}$ is also a cycle. Show that this is not true for cycles of even length by giving a counterexample.

Exercise 6. Let $\sigma \in \mathfrak{S}_{n}$.

1. Show that $\sigma$ can be written as a product of at most $n-1$ transpositions.
2. Show that if $\sigma$ is not a cycle, then $\sigma$ can be written as a product of at most $n-2$ transpositions.

Exercise 7. 1. Give a list of all possible orders of an element of $\mathfrak{S}_{4}$.
2. Give a list of all possible orders of an element of $\mathfrak{S}_{5}$.
