

Development of the AeroSol library within CARDAMOM

Marco Lorini

April 21, 2021

AeroSol = **Aer**odynamics **Sol**ver Platform

- ▷ Developed since 2011 within the teams **CARDAMOM** (and formerly BACCHUS) and **CAGIRE**.

- ▷ High-order **continuous** (CG) and **discontinuous** (DG) finite element methods.

- ▷ Up to fifth order **hybrid** and/or **curvilinear meshes**.

- ▷ Efficient parallelism on **HPC** for real-life large-scale applications.

Other dependencies and tools:

PETSc

CMake - CTest

GitLab - C.I.

Gmsh

ParaView

HDF5

Mmg - ParMmg

⇒ **Complex set-up and installation on different architectures!**

- ▷ Documentation available for the GitLab project members (40)
- ▷ Library installed on local clusters (Plafrim, Curta)
- ▷ Installation through Guix is also possible (Cagire)
- ▷ [▶ Link to installation wiki](#)

⇒ **Steep learning curve when approaching the library!**

- ▷ 28 test-cases documented for 5 different models
- ▷ Time log for reproducibility of results
- ▷ [▶ Link to tests wiki](#)

Cubature elements for stabilized CG

- ▷ 2D, continuous interior penalty stabilization, SSPRK time scheme, cubature elements.
- ▷ S.Michel, B.Lux, V.Perrier, H.Beaugendre, M.Ricchiuto

Cubature elements for stabilized CG

- ▷ 2D, continuous interior penalty stabilization, SSPRK time scheme, cubature elements.
- ▷ S.Michel, B.Lux, V.Perrier, H.Beaugendre, M.Ricchiuto

Immersed boundary methods for DG

- ▷ 2D/3D, unfitted discretization, penalization, mesh adaptation
- ▷ M.Lorini, V.Perrier, M.Ricchiuto

Cubature elements for stabilized CG

- ▷ 2D, continuous interior penalty stabilization, SSPRK time scheme, cubature elements.
- ▷ S.Michel, B.Lux, V.Perrier, H.Beaugendre, M.Ricchiuto

Immersed boundary methods for DG

- ▷ 2D/3D, unfitted discretization, penalization, mesh adaptation
- ▷ M.Lorini, V.Perrier, M.Ricchiuto

Embedded boundary methods for DG

- ▷ 2D/3D, unfitted discretization, shifted boundary method
- ▷ M.Lorini, M.Ciallella, M.Ricchiuto

Cubature elements for stabilized CG

- ▷ 2D, continuous interior penalty stabilization, SSPRK time scheme, cubature elements.
- ▷ S.Michel, B.Lux, V.Perrier, H.Beaugendre, M.Ricchiuto

Immersed boundary methods for DG

- ▷ 2D/3D, unfitted discretization, penalization, mesh adaptation
- ▷ M.Lorini, V.Perrier, M.Ricchiuto

Embedded boundary methods for DG

- ▷ 2D/3D, unfitted discretization, shifted boundary method
- ▷ M.Lorini, M.Ciallella, M.Ricchiuto

Coupling of AeroSol and ParMMG

- ▷ 2D/3D, parallel mesh adaptation
- ▷ M.Lorini, L.Cirrottola

Modal shock capturing for DG

- ▷ 2D/3D, laplacian artificial viscosity, modal shock sensor.
- ▷ M.Lorini

Modal shock capturing for DG

- ▷ 2D/3D, laplacian artificial viscosity, modal shock sensor.
- ▷ M.Lorini

Formal code verification of the DG solver

- ▷ 2D/3D, benchmarks, manufactured solutions.
- ▷ M.Lorini, M.Ciallella

Modal shock capturing for DG

- ▷ 2D/3D, laplacian artificial viscosity, modal shock sensor.
- ▷ M.Lorini

Formal code verification of the DG solver

- ▷ 2D/3D, benchmarks, manufactured solutions.
- ▷ M.Lorini, M.Ciallella

... and two codes based on the AeroSol library

GeoFun

- ▷ M.Lorini, M.Parisot

Uhaina

- ▷ C. Poette, S.Michel, V.Perrier, M.Ricchiuto, M.Kazolea

An example: 3D immersed simulation of a delta wing

3D viscous flow (DG P2) around an immersed delta wing

- ▷ Classical test-case for conformal adaptive methods, computed with a non-conformal method.
- ▷ Different techniques involved:
 - Level-set implicit representation of the geometry
 - IBM (volumic penalization)
 - Mesh adaptation
 - H.O. visualization
- ▷ Paper in preparation (M.Lorini, V.Perrier, M.Ricchiuto).

PROS

- ▷ Shared development environment
- ▷ C++ modularity
- ▷ Template abstraction

Working in AeroSol: Pros and Cons

PROS

- ▷ Shared development environment
- ▷ C++ modularity
- ▷ Template abstraction

CONS

- ▷ Shared development environment
- ▷ C++ modularity
- ▷ Template abstraction

Working in AeroSol: Pros and Cons

PROS

- ▷ Shared development environment
- ▷ C++ modularity
- ▷ Template abstraction

CONS

- ▷ Shared development environment
- ▷ C++ modularity
- ▷ Template abstraction

Dependency graph for the C++ class of the penalization operator

Codes based on AeroSol: GeoFun

A porous aquifer in Utah

ANR GEOphysical Flows with UNified models

- ▷ Geophysical flows (free surface and underground)
- ▷ Unified vertically integrated models

- ▷ Cell-centered **Finite Volume** discretization
- ▷ **External development** w.r.t. AeroSol
- ▷ Testing single models implemented (Dupuit-Forchheimer, shallow water)

A shallow water dam break test in 2D

Codes based on AeroSol: Uhaina
