

Contents

1	Some topics in commutative algebra	1
1.1	Tensor products	1
1.1.1	Tensor product of modules	1
1.1.2	Right-exactness of the tensor product	4
1.1.3	Tensor product of algebras	5
1.2	Flatness	6
1.2.1	Left-exactness: flatness	6
1.2.2	Local nature of flatness	9
1.2.3	Faithful flatness	12
1.3	Formal completion	15
1.3.1	Inverse limits and completions	16
1.3.2	The Artin–Rees lemma and applications	21
1.3.3	The case of Noetherian local rings	23
2	General properties of schemes	26
2.1	Spectrum of a ring	26
2.1.1	Zariski topology	26
2.1.2	Algebraic sets	29
2.2	Ringed topological spaces	33
2.2.1	Sheaves	33
2.2.2	Ringed topological spaces	37
2.3	Schemes	42
2.3.1	Definition of schemes and examples	42
2.3.2	Morphisms of schemes	45
2.3.3	Projective schemes	51
2.3.4	Noetherian schemes, algebraic varieties	55
2.4	Reduced schemes and integral schemes	60
2.4.1	Reduced schemes	60

2.4.2	Irreducible components	62
2.4.3	Integral schemes	65
2.5	Dimension	68
2.5.1	Dimension of schemes	68
2.5.2	The case of Noetherian schemes	71
2.5.3	Dimension of algebraic varieties	73
3	Morphisms and base change	78
3.1	The technique of base change	78
3.1.1	Fibered product	78
3.1.2	Base change	81
3.2	Applications to algebraic varieties	87
3.2.1	Morphisms of finite type	87
3.2.2	Algebraic varieties and extension of the base field	89
3.2.3	Points with values in an extension of the base field	93
3.2.4	Frobenius	95
3.3	Some global properties of morphisms	101
3.3.1	Separated morphisms	101
3.3.2	Proper morphisms	105
3.3.3	Projective morphisms	109
4	Some local properties	115
4.1	Normal schemes	115
4.1.1	Normal schemes and extensions of regular functions	115
4.1.2	Normalization	119
4.2	Regular schemes	127
4.2.1	Tangent space to a scheme	127
4.2.2	Regular schemes and the Jacobian criterion	129
4.3	Flat morphisms and smooth morphisms	136
4.3.1	Flat morphisms	137
4.3.2	Étale morphisms	140
4.3.3	Smooth morphisms	142
4.4	Zariski's 'Main Theorem' and applications	150
5	Coherent sheaves and Čech cohomology	157
5.1	Coherent sheaves on a scheme	157
5.1.1	Sheaves of modules	157
5.1.2	Quasi-coherent sheaves on an affine scheme	159
5.1.3	Coherent sheaves	161
5.1.4	Quasi-coherent sheaves on a projective scheme	164

<i>Contents</i>	xiii
5.2 Čech cohomology	179
5.2.1 Differential modules and cohomology with values in a sheaf	179
5.2.2 Čech cohomology on a separated scheme	186
5.2.3 Higher direct image and flat base change	189
5.3 Cohomology of projective schemes	196
5.3.1 Direct image theorem	196
5.3.2 Connectedness principle	199
5.3.3 Cohomology of the fibers	202
6 Sheaves of differentials	210
6.1 Kähler differentials	210
6.1.1 Modules of relative differential forms	210
6.1.2 Sheaves of relative differentials (of degree 1)	215
6.2 Differential study of smooth morphisms	220
6.2.1 Smoothness criteria	220
6.2.2 Local structure and lifting of sections	223
6.3 Local complete intersection	227
6.3.1 Regular immersions	228
6.3.2 Local complete intersections	232
6.4 Duality theory	237
6.4.1 Determinant	237
6.4.2 Canonical sheaf	239
6.4.3 Grothendieck duality	244
7 Divisors and applications to curves	252
7.1 Cartier divisors	252
7.1.1 Meromorphic functions	252
7.1.2 Cartier divisors	256
7.1.3 Inverse image of Cartier divisors	260
7.2 Weil divisors	267
7.2.1 Cycles of codimension 1	267
7.2.2 Van der Waerden's purity theorem	273
7.3 Riemann–Roch theorem	276
7.3.1 Degree of a divisor	276
7.3.2 Riemann–Roch for projective curves	279

7.4	Algebraic curves	286
7.4.1	Classification of curves of small genus	286
7.4.2	Hurwitz formula	290
7.4.3	Hyperelliptic curves	293
7.4.4	Group schemes and Picard varieties	298
7.5	Singular curves, structure of $\text{Pic}^0(X)$	305
8	Birational geometry of surfaces	317
8.1	Blowing-ups	317
8.1.1	Definition and elementary properties	318
8.1.2	Universal property of blowing-up	323
8.1.3	Blowing-ups and birational morphisms	326
8.1.4	Normalization of curves by blowing-up points	330
8.2	Excellent schemes	332
8.2.1	Universally catenary schemes and the dimension formula	333
8.2.2	Cohen–Macaulay rings	335
8.2.3	Excellent schemes	342
8.3	Fibered surfaces	348
8.3.1	Properties of the fibers	348
8.3.2	Valuations and birational classes of fibered surfaces	354
8.3.3	Contraction	357
8.3.4	Desingularization	362
9	Regular surfaces	375
9.1	Intersection theory on a regular surface	376
9.1.1	Local intersection	376
9.1.2	Intersection on a fibered surface	381
9.1.3	Intersection with a horizontal divisor, adjunction formula	389
9.2	Intersection and morphisms	395
9.2.1	Factorization theorem	395
9.2.2	Projection formula	397
9.2.3	Birational morphisms and Picard groups	401
9.2.4	Embedded resolutions	404
9.3	Minimal surfaces	412
9.3.1	Exceptional divisors and Castelnuovo’s criterion	413
9.3.2	Relatively minimal surfaces	418
9.3.3	Existence of the minimal regular model	422
9.3.4	Minimal desingularization and minimal embedded resolution	425

<i>Contents</i>	xv
9.4 Applications to contraction; canonical model	430
9.4.1 Artin's contractability criterion	431
9.4.2 Determination of the tangent spaces	436
9.4.3 Canonical models	440
9.4.4 Weierstrass models and regular models of elliptic curves	444
10 Reduction of algebraic curves	454
10.1 Models and reductions	454
10.1.1 Models of algebraic curves	455
10.1.2 Reduction	462
10.1.3 Reduction map	467
10.1.4 Graphs	471
10.2 Reduction of elliptic curves	483
10.2.1 Reduction of the minimal regular model	484
10.2.2 Néron models of elliptic curves	489
10.2.3 Potential semi-stable reduction	498
10.3 Stable reduction of algebraic curves	505
10.3.1 Stable curves	505
10.3.2 Stable reduction	511
10.3.3 Some sufficient conditions for the existence of the stable model	521
10.4 Deligne–Mumford theorem	532
10.4.1 Simplifications on the base scheme	533
10.4.2 Proof of Artin–Winters	537
10.4.3 Examples of computations of the potential stable reduction	543
Bibliography	557
